

TOURTALK

HEARING SUPPORT SYSTEMS

A Tourtalk TT 40 hearing support system is a personal wireless audio system.

It is designed to aid communication with hard of hearing people in noisy environments or over distance.

Ensure you are clearly heard on your next presentation and provide a professional experience!

The Tourtalk TT 40-HS24N is a complete hearing system comprising 1 transmitter with lapel microphone (for the presenter), 24 receivers with earphones and neck loops (for the audience), and a charger transport case.

Examples of use Inclusive tours and excursions

Hearing support for employees

Assistive listening at public meetings

How it works

The Transmitter

The transmitter features an integrated microphone, microphone socket (to connect the lapel microphone), and microphone mute switch. An aux-in socket to enable the connection of an mp3 player is also provided.

The presenter can speak at a comfortable level without having to raise their voice.

The Receivers

The receivers feature a headphone socket to connect either the earphone, or inductive neck loop (if they are a hearing aid wearer). The audience can then adjust their own volume to a comfortable level.

A wide range of accessories are available for the Tourtalk system to suit many applications. For more information please visit the website.

TT 40-HS1N

TT 40-HS14N
